ACADEMIC / PERSONAL PROJECTS

Cloud kitchen System   *MERN Stack (MongoDB, Express.js, React, Node.js)*   Github

- Designed and developed a Cloud Kitchen Management System to handle online orders, menu management, and customer interactions
- Implemented order tracking, kitchen workflow management, and real-time order status updates
- Integrated inventory monitoring and sales reporting to improve operational efficiency and decision-making

Property Management System   *Java, HTML, CSS, Bootstrap, MySQL*   Github

- Developed a Java-based Online Property Management System
- Managed property listings, tenant records, and lease details efficiently
- Used Java Servlets and MVC architecture for better structure and usability

PureBrand Dress System   *Next.js , Tailwind CSS*   Github

- Developed the PureBrand Dress System to manage product listings and customer orders efficiently
- Implemented order processing and inventory management to support smooth sales operations

Online Perfume Store   *React.js , Tailwind CSS , Vite*   Github

- Developed an Online Perfume Store for browsing products and managing customer orders
- Implemented product listings, order handling, and basic inventory management

Online Marketing Store system   *PHP, HTML, CSS, MySQL*   Github

- Built an Online Marketing Store to manage products, orders, and customer accounts
- Added inventory tracking, sales reports, and payment handling to improve operations
